

Jakson Green Hits 5 GWp in Solar O&M, Powered by New 1 GWp Orders

New Delhi, 10th June 2025: Jakson Green Renewables, the asset management arm of Jakson Green, has secured 1 GWp Operation & Maintenance (O&M) project. With these latest additions, Jakson Green's total O&M portfolio now stands at a total of 5 GWp, reinforcing its leadership in the renewable energy sector.

These projects comprise four high-capacity solar projects, ranging from 75 MWp to 435 MWp, strategically located across Rajasthan, Chhattisgarh, and Tamil Nadu. This highlights Jakson Green's expertise in managing large-scale solar assets. The various solar projects the company has done over the years have given it a cutting edge over competitors, by ensuring optimal performance and efficiency.

Commenting on this milestone, **Mr. Kannan Krishnan, Joint Managing Director, Jakson Green**, said, "This addition in new third-party O&M orders is a testament to our firm commitment to reliability in solar asset management. With a portfolio now at 5 GWp, we are well-positioned to drive sustainable energy solutions across India and beyond. Our focus remains on delivering superior operational performance and maximising returns for our clients."

Mr. Lalit Mishra, Head of O&M, Jakson Green Renewables, added, *"These projects reflect our engineering and technical expertise and ability to manage diverse solar assets at scale. Our team's dedication to innovation and efficiency ensures that we maintain the highest standards in O&M services, contributing to the long-term success of renewable energy projects."*

With this addition of 1GWp, Jakson Green has a 5 GWp O&M portfolio, which is a mix of in-house and third-party projects. This not only demonstrates the company's versatility in handling projects but also its capability in managing solar assets across different geographies. With a strong presence across the globe, Jakson Green continues to lead the charge in sustainable energy solutions, supporting the global transition to clean energy.

About Jakson Green:

Jakson Green, a global new energy transition platform headquartered in Noida, India, with an international headquarters in Dubai, is backed by the Jakson Group. Catering to corporations and government entities, the company focuses on EPC, IPP, BOO, and O&M of new energy assets across solar, wind, green molecules, and CBG. With a solar EPC portfolio exceeding 8GWp globally, 5GWp of renewable O&M, and over 1.5GWp of assets under development, Jakson Green is a leading player in the renewable energy sector. Founded in 2022, the company is actively building 8500TPA of green molecules plants, including green hydrogen, 4G ethanol, and low-carbon methanol. Its subsidiary, Jakson Infinity, boasts a 300MW electrolyser manufacturing capacity. As part of its growth strategy, Jakson Green is also expanding into the biofuels business.
